## Supporting the Global AIDS Response as a Community Partner

We scale up service quality, reach, and retention across the HIV cascade by...

Using HIV-sensitive case management to deliver a responsive package of services to C/ALHIV and their families.

Upskilling networks of community volunteers to become HIV frontline workers.

Engaging health facilities in systematic clinic-community referral networks and partnerships.

Introducing effective adherence and viral load tracking tools for epidemic control at community level.

Real-time data sharing between clinic and community teams to improve follow-up and treatment outcomes.
